

Lakeside EFW Case Study

In 2005, waste management giants Grundon and Viridor formed a joint venture, Lakeside Energy From Waste, to develop one of the most comprehensive programs in the world for producing energy from waste.

The existing Grundon site at Colnbrook was completely redeveloped over the next three years and CBS were proud to be appointed suppliers for their new office furniture and seating.

The architect-designed office building was industrially styled with sleek shapes and monotone colours and the client wanted the furniture to reflect this. All desking and storage was therefore specified in shades of silver and grey with seating in accent colours of blue, green and yellow.

CBS are delighted to have been involved with this project, especially as it reflects our own environmental aspirations.

Project Foreman, Alan Trueman said:

"CBS were successful in winning the furniture tender and thereafter have delivered everything as promised. The design team listened to us and produced elegant solutions with a high degree of functionality. The procurement element was excellent and all furniture was installed by a highly impressive team. Following on, the after-sales support and dialogue continues to be of the same high quality. The whole experience makes for a seriously nice change"
